

Few_Shot.py

```
example_list = [
    {
        "input": "Bookings information : COUNT , LIST , PROVIDE , SELECT , GIVE ME , SHOW ",
        "output": """"Thought: In case user doesn't provide or use the word Total OR COUNT or LIST word ,
then ask user to provide the
Action: ask_for_parameter
Action Input: "Do you want count of Booking ",
If user says Yes , then
Action: ask_for_parameter
Action Input: Which "ZoneCode"
Observation: If user provides the input, use that input to the Question.
Thought: now query the database should be based on input question as where clause.
Action: sql_db_query
Action Input: SELECT *
        FROM
            BKG_JO_INTERFACE BKG,
            CAP_GEO_SCOPE CAP1 ,
            CAP_GEO_SCOPE CAP2
        WHERE
            CAP1.GEO_SCOPE_SEQ = BKG.POL_TERMINAL_SEQ
            AND CAP2.GEO_SCOPE_SEQ = BKG.SHIPPER_CITY_SEQ
            AND ISNULL(BKG.JO_STATUS,'N') = 'N'

Observation: [('USNC',2380)]
Else if
User Says no
Action: ask_for_parameter
Action Input: List or Give Or provide list of all booking numbers "
Action: Which "ZoneCode"
Observation: now query the database should be based on input question as where clause.
Thought: now query the database based on zone code to count the booking nos
Action: sql_db_query
Action Input: SELECT *
        FROM
            BKG_JO_INTERFACE BKG,
            CAP_GEO_SCOPE CAP1 ,
            CAP_GEO_SCOPE CAP2
        WHERE
            CAP1.GEO_SCOPE_SEQ = BKG.POL_TERMINAL_SEQ
            AND CAP2.GEO_SCOPE_SEQ = BKG.SHIPPER_CITY_SEQ
            AND ISNULL(BKG.JO_STATUS,'N') = 'N'

Observation: Show the list of bookings.
Final Answer : ...
""""
